

TEHCCEPTION

ONLINE PR & OUTREACH PLAYBOOK

Panel 1 · Online Promotion
Prepared by Jeethesh Sriphani

THE OBJECTIVE

Make Techception feel less like “another college event” and more like something students will regret missing.

The campaign is built around one principle: curiosity first, information second, registration third.

01 THE CAMPAIGN IDEA

A campaign that behaves like a feed-native story, not an event announcement. Instead of repeatedly telling students that Techception exists, we create small moments that make them ask: “What is this?”

CAMPAIGN LINE

“You weren’t supposed to see this.”

The line becomes the recurring creative device across reels, stories and posts. It gives every piece a reason to exist and makes the campaign feel connected.

02 CONTENT SYSTEM

FORMAT	PURPOSE	EXECUTION
REELS	Reach + curiosity	Short, fast edits with a visual interruption in the first second. The event is revealed only after the viewer is already watching.
STORIES	Interaction + intent	Polls, countdowns, “choose your move” frames, question stickers and direct registration CTAs.
CAROUSELS	Clarity + saves	One idea per slide. Strong headline, minimal copy, consistent visual system and a final CTA.
PROOF CONTENT	Trust + FOMO	Clips of people reacting, competing, preparing or talking about Techception. Show the event rather than describing it.

03 REEL CONCEPTS

Every reel below includes the hook, the visual action and the conversion path. These are designed to be shootable on campus with a phone.

REEL 01 — THE GLITCH

HOOK — 0–1 sec: A normal campus shot abruptly glitches. Text flashes: “DON’T REGISTER.”

BEAT — 1–6 sec: Rapid cuts of a person receiving three cryptic clues on screen. The final clue points to “TECHCEPTION.”

REVEAL — 6–12 sec: Hard cut to the Techception identity + date/details.

CTA — 12–15 sec: “Okay. You can register now.” → registration CTA.

Why it works: the first frame creates contradiction. The viewer has to stay long enough to understand the joke.

REEL 02 — 3 SECONDS TO CHOOSE

HOOK — 0–2 sec: “You have 3 seconds. Pick one.” Three choices appear instantly.

BEAT — 2–7 sec: Countdown. Each choice gets a visual consequence / fast campus cut.

REVEAL — 7–11 sec: “There’s one place where this gets harder.” → Techception reveal.

CTA — 11–15 sec: “Your move.” → registration CTA.

Why it works: it turns passive scrolling into a micro-decision.

REEL 03 — THE WRONG PERSON

HOOK — 0–2 sec: A student walks into frame: “I’m definitely not going to Techception.”

BEAT — 2–8 sec: Friends silently look at camera. One says: “Sure.” Smash-cut montage of what they are missing.

REVEAL — 8–13 sec: Techception identity + event value points.

CTA — 13–16 sec: “See you there.” → registration CTA.

Why it works: simple campus humour, recognisable behaviour and low production cost.

04 VISUAL LANGUAGE

LOOK & FEEL

Dark editorial base + one high-energy accent. Large condensed-style headlines, tight crops, high-contrast photography, intentional grain/noise, sharp transitions and generous negative space. Avoid generic gradients, stock graphics and over-filled posters.

Rule: every asset should be recognisable as Techception even before the logo appears.

05 STORY CONVERSION FLOW

DISCOVER	INTERACT	BELIEVE	REGISTER
Reel hook / campus clip	Poll / choice / comment	Proof + event details	Single clear CTA

06 7-DAY CONTENT SPRINT

DAY	CONTENT	EXECUTION
D-7	Campaign reveal	Hero reel + story question: "Would you open it?"
D-6	Curiosity	Cryptic carousel; no full explanation until final slide.
D-5	Interaction	Choice-based story + reply prompt. Repost the best responses.
D-4	Proof	Short human reaction reel / campus footage.
D-3	Value	Carousel answering "Why should I care?" in 4-5 sharp points.
D-2	FOMO	Fast montage + countdown sticker + registration reminder.
D-1	Conversion	Final reel: strongest proof + exact event information + direct CTA.

07 EXECUTION — NOT JUST CONTENT

The brief rewards teams that actually shoot and edit. So the online plan should produce original footage from REC rather than relying on templates.

- Capture: one phone camera, one person directing, one person performing, natural campus locations.
- Edit: keep reels tight; cut on movement, use on-screen text, remove dead air, and design the first frame intentionally.
- Human proof: show real students reacting, choosing, laughing, competing or being confused by the campaign.
- Distribution: publish from the official account, then give panel members a ready-to-share story frame and caption so the campaign spreads through personal networks.

08 METRICS THAT MATTER

DON'T MEASURE ONLY VIEWS.

Reach → Did the campaign enter new feeds?

3-second retention → Did the hook work?

Shares / replies → Did it create a reaction?

Profile visits → Did curiosity become intent?

Registration clicks → Did the content convert?

Registrations by content source → Which idea actually worked?

After the first 48 hours, keep the strongest-performing hook and iterate it instead of continuing to post equally.

09 THE PRINCIPLE

Techception should not feel like an announcement that students are being asked to notice. It should feel like something they discovered — and then chose to be part of.

This plan deliberately moves from curiosity → interaction → proof → registration. It gives the team content that can be executed quickly, while keeping the campaign visually consistent and measurable.
